

ARE YOU AT RISK FOR Lung Cancer?

IF YOU'RE A CURRENT OR FORMER SMOKER, GET PEACE OF MIND WITH A LUNG CANCER SCREENING

According to the American Cancer Society®, lung cancer is the second most common cancer in both men and women. In fact, men have about a 1 in 15 chance of developing lung cancer in their lifetime. For women, the risk is about 1 in 17. These numbers apply to both smokers and non-smokers, however, those who smoke are at much higher risk. Early detection is important, as catching cancer early often allows for a greater likelihood of successful treatment.

**CT LUNG SCREENING
AT AN AFFORDABLE PRICE:**

ONLY \$85*

Call 956-388-2190 for an appointment.

- Lung Cancer Early Detection and Treatment Program
- Get a low-dose lung CT screening exam
- Recommended for adults 50-80 years of age at risk for lung cancer
- Covered by Medicare Part B for eligible patients

If lung cancer is found at an earlier stage, you have a better chance of living longer. Low-dose CT scans save more lives compared to traditional X-rays.

Physician referral required.
